Experience

Web Developer in Wipro (2019 – Now)

In this project client was very active, I had to take task directly from the client almost every day, needed to understand the task carefully and try to convert the given task into programmatically approachable way, as I could not be able to approach client often as he would be having limited time, so I have to be very active while taking tasks from the client.

I had to deliver the given the task on time and to follow the code structure as I would be pushing the code to QA and Prod branch.

My account being one of the top textile brands, always expected better outcome with high level of precision from their employees, from developing the website for the users to applying designs on the body of the shirts in every task they were expecting high level of precision, for example where the logo need to be placed, color of the shirt etc., they were continuously evaluating each and every task to avoid any errors and issues.

Even though large part of the project was dependent on React, still some part of it depended on various technologies like Java, Python, Node JS etc.

ABOUT ME

2+ years experienced Software Engineer highly skilled in web development. across the complete development life cycle of a product.

Adept at end to end web design & development including requirement gathering, documentation, infrastructure setup, coding & git skills.

Handles complex project management & coordination work very efficiently to deliver results.

Skills

React JS: _____
Mongo DB: _____
Node: _____
Express JS: _____
Redux: _____

Education

PES PU (11 -12)

Dayanand Sagar

2015-2018, completed my BCA, affiliated to Bangalore University.
